

MWL Systems is an established software & systems house based in North Wales near Chester. We develop web and intranet based databases and applications for an interesting and diverse range of clients in a wide range of industries and we need another developer to join our small but expert development team.

A good level of SQL Server development (design, stored procedures, indexing and performance improvement) knowledge is **essential** for this role.

Our applications are ASP.net (VB.net and C#), and ideally you will have at least 3 years commercial development experience with ASP.net and SQL Server. A good knowledge of Application configuration and security within IIS will also be required. Experience with Javascript and particular JQuery and Telerik Kendo UI would be an advantage.

Our projects are all for commercial organisations rather than the general public facing, so performance, meeting requirements and exceptional support are the focus. We have a range of products which are continuously being enhanced and developed in partnership with our customers, so maintaining the customer relationship and working with them to identify product improvements is an important part of the role.

Essential skills

- A high level of competence in SQL Server design, stored procedures, indexing and performance improvement
- A very good understanding of databases and database concepts in general
- A good level of competence in ASP.net (VB.net) and Javascript
- Good working knowledge of IIS
- Good level of knowledge about security (IIS and ASP.net)
- Experience with working in Visual Studio
- Report design in Crystal Reports for ASP.net and SQL Server Reporting Services for ASP.net
- Experience with Javascript
- Experience of developing and consuming SOAP and REST web services
- Ability to design functional and easy to use interfaces (usability is more important than prettiness)
- Provide 1st line support and take ownership of problems
- Good problem solving skills
- Customer focused

Advantageous skills

- High volume and high availability design practices for IIS, ASP.net and SQL Server
- Coming from a development background with working knowledge of methodologies and working practices for the entire development lifecycle
- Knowledge of HTML5, CSS and JQuery
- Knowledge of Microsoft CRM/Dynamics 365
- Knowledge of WebAPI
- Knowledge of OAuth
- IOS development (either native or via Xamarin)
- Android development (either native or via Xamarin)
