

MWL Systems is an established software & systems house based in North Wales near Chester. We develop web and intranet based databases and applications for an interesting and diverse range of clients in a wide range of industries and we need another developer to join our small but expert development team.

We require a developer with strong JavaScript knowledge to both complement our .net team and also to be able to work independently on none .net projects where the focus is on client side data processing and functionality. The projects you will be involved in cover

- Adding front end functionality to ASP.net projects
- Creating standalone JavaScript based web pages and applications
- Developing JavaScript based “apps” for Microsoft CRM/Dynamics CRM and SharePoint.
- Adding functionality to existing MSCRM Forms via JavaScript

Although JQuery use is encouraged, the ability to write normal JavaScript and work without JQuery is essential as some CRM and SharePoint projects are restrictive on JQuery use.

Knowledge of HTML5, CSS and JQuery as well as consuming data via JavaScript and JavaScript databinding techniques are the essential skills for this role. Knowledge of MS CRM/Dynamics CRM, SharePoint and JavaScript frameworks such as Angular and Telerik Kendo UI would be advantageous. Our projects will utilise either a local SQL Server database or remote data in some sense, so a working knowledge of SQL Server and web services as well as OData would also be an advantage.

Our projects are all for commercial organisations rather than the general public facing, so performance, meeting requirements and exceptional support are the focus. We have a range of products which are continuously being enhanced and developed in partnership with our customers, so maintaining the customer relationship and working with them to identify product improvements is an important part of the role.

#### Essential skills

- Strong Javascript and JQuery skills
- Good understanding of CSS
- Good working knowledge of web technologies
- Experience of consuming web services and databinding techniques in Javascript
- Ability to design functional and easy to use interfaces (usability is more important than prettiness)
- Provide 1st line support and take ownership of problems
- Good problem solving skills
- Customer focused

#### Advantageous skills

- Experience of developing SOAP and REST web services
- Experience working with OData
- A good understanding of databases and database concepts in general Knowledge of Microsoft CRM/Dynamics 365
- Knowledge of WebAPI
- Knowledge of OAuth
